

# Advance™

## The New Revolutionary Patented StaticLine System

Advance Corner Unit

Advance Intermediate T-Bolt

Advance End Unit

### The right staticline for the job....

- SafetyLink™'s Advance™ Plate is multi directional, attaching to the top of the profile on the roof sheeting for superior waterproofing.
- Less components, easier to install with comprehensive installation guides.
- Advance™ Surface Mounted Plate is made from marine grade aluminium.
- Intermediate T-Bolt forged from 316 Stainless Steel with energy absorbing qualities.
- Advance™ Corner Unit can be manufactured to suit any degree.
- Advance™ End Unit has unique shock absorbing qualities, made from 316 stainless steel.

## Advance™ Revolutionary Patented SurfaceLink

The Advance™ SurfaceLink is a single anchor.

- Multi directional, less components, easier to install with comprehensive installation guides.
- Advance™ Surface Mounted Plate is manufactured from marine grade aluminium.
- SafetyLink™ Eyebolt is forged from 316 Stainless Steel with powerful energy absorbing qualities.
- The SafetyLink™ Eyebolt and T-Bolt are forged not welded, eliminating errors increasing strength and durability. The eyebolt was developed and tested extensively to maximize energy absorption while retaining its strength when arresting a fall. The tapered design enables it to bend like a fishing pole to reduce the load back on the structure and the person attached to the anchor.
