

SafetyLink™ Pty Ltd

NEW

RetroLink Tube enables you to install Anchors almost anywhere

The New SafetyLink® Patented RetroLink can be installed onto a metal C or Z purlin, where no access is available from underneath the roof. The anchor is an abseiling and fall arrest anchor with an unobtrusive design that requires no special tooling and minimal penetration to the roof sheeting.

The RetroTube and Washer component can also be used as a versatile unit accommodating any 16mm threaded component.

Installation is a simple process requiring only one hole to be drilled into the roof sheeting and through the purlin, a waterproofing washer combined with an o ring seals the hole.

The SafetyLink® Retro Eyebolt has been tested to over 22kN and is designed to bend like a fishing pole to reduce the load back on the structure and the person attached to the anchor

Our product range includes anchors, staticline systems, permanent ladder systems, ladder stabilisers and walkways.
